

Lexical Structure

Σ is the set of ascii characters.

Notation: $a?$ is an abbreviation for $(a \mid \epsilon)$

$\langle \text{LineTerminator} \rangle ::= \text{LF} \mid \text{CR} \mid \text{CR LF}$

LF is the ASCII LF character, also known as "newline", CR is the ASCII CR character, also known as "return". A CR immediately followed by an LF is considered one LineTerminator, not two.

$\langle \text{InputCharacter} \rangle ::= \text{Not}(\text{CR} \mid \text{LF})$

$\langle \text{Input} \rangle ::= \langle \text{InputElements} \rangle? \text{SUB}?$

*$\langle \text{Input} \rangle$ defines a well-formed input file
SUB is the ASCII SUB character, also known as "control-Z"*

$\langle \text{InputElements} \rangle ::= \langle \text{InputElement} \rangle^*$

$\langle \text{InputElement} \rangle ::= \langle \text{WhiteSpace} \rangle \mid \langle \text{Comment} \rangle \mid \langle \text{Token} \rangle$

$\langle \text{Token} \rangle ::= \langle \text{Identifier} \rangle \mid \langle \text{Keyword} \rangle \mid \langle \text{Literal} \rangle \mid \langle \text{Separator} \rangle \mid \langle \text{Operator} \rangle$

$\langle \text{Separator} \rangle ::= . \mid ; \mid , \mid (\mid) \mid [\mid] \mid : \mid \{ \mid \}$

$\langle \text{Operator} \rangle ::= = \mid | \mid \& \mid == \mid != \mid < \mid > \mid <= \mid >= \mid + \mid - \mid * \mid / \mid !$

$\langle \text{Literal} \rangle ::= \langle \text{IntLiteral} \rangle \mid \langle \text{StringLiteral} \rangle \mid \langle \text{BooleanLiteral} \rangle$

$\langle \text{WhiteSpace} \rangle ::= \text{SP} \mid \text{HT} \mid \text{FF} \mid \langle \text{LineTerminator} \rangle$

*SP is the ASCII SP character, also known as "space"
HT is the ASCII HT character, also known as "horizontal tab"
FF is the ASCII FF character, also known as "form feed"*

$\langle \text{Comment} \rangle ::= \#\# (\#? \text{Not}(\#))^* \#\#$

$\langle \text{Identifier} \rangle ::= \langle \text{IdentifierStart} \rangle \langle \text{IdentifierPart} \rangle^*$

but not $\langle \text{Keyword} \rangle$ and not $\langle \text{BooleanLiteral} \rangle$

$\langle \text{IdentifierStart} \rangle ::= \text{A} \dots \text{Z} \mid \text{a} \dots \text{z} \mid \$ \mid _$

$\langle \text{IdentifierPart} \rangle ::= \langle \text{IdentifierStart} \rangle \mid 0 \dots 9$

<Keyword> ::= **prog** | **gorp** | **string** | **int** | **boolean** | **map** | **if** | **else** | **fi** | **do** | **od** | **print** | **println**

<IntegerLiteral> ::= **0** | ((**1..9**) (**0..9**))*

<BooleanLiteral> ::= **true** | **false**

<StringLiteral> ::= **"StringCharacter* "**

<StringCharacter> ::= <InputCharacter> but not **"** or **** | <EscapeSequence>

<EscapeSequence> ::= **\b** | **\n** | **\f** | **\r** | **\"** | ****

\t is a horizontal tab HT, **\n** is a linefeed LF, **\f** is a form feed FF, **\r** is a carriage return CR, **\"** is a double quote, **** is a backslash
